Attic Radiant Barriers · Crawl Space Encapsulation

Attic Radiant Barriers

Originally developed by NASA to insulate astronauts from extreme temperatures, Radiant Barriers warm your home in the coolest way. The highly reflective foil surfaces reflect radiant heat into your home to keep you warm in winter. In addition, they reflect heat out during the summer months to keep you cool. This newer, more efficient insulation technology keeps your energy bill lower than traditional insulation all year long.

Average Energy Savings: 25%
— U.S. Dept. of Energy

Crawl Space Encapsulation

Encapsulating your crawl space is another great way to make your home more energy efficient, and it can increase indoor air quality as well. Not only that, but encapsulation offers added protection to your home's foundation and ductwork by managing water and moisture within the crawl space, and added protection to wood structures from termites and other insects.

Average Energy Savings: 15%

Attic Radiant Barriers · Crawl Space Encapsulation

Reasons why Enviroguard should be your restored attic or crawl space contractor...

- Experience:** Serving the Central and Tidewater areas for over 15 years, a team with over 75 years of experience. A privately owned company specializing in exterior restoration work, from residential applications to extreme complex commercial applications.
- Assurance:** Envirowash is a Virginia State Class A contractor (license #2705106443). We carry a \$2,000,000 general liability insurance policy and \$500,000 Workman's compensation package.
- Environment:** All of our materials are environmentally responsible and the end result of our attic/crawl space restoration is a clean, healthy area envelope. This process greatly reduces your carbon foot print while providing you a much safer environment for your family's living area.
- Professionalism:** Our technicians are well trained in using the latest cutting edge materials and procedures to provide you and your family with years of worry free protection and 30–40% energy savings (combing both attic & crawl space restoration) every year.
- Technology:** Our newer, more efficient insulation technology keeps your energy bills lower than traditional insulation and provides a more comfortable indoor living environment free of allergens and radon gases.
- Crawl Space Encapsulation:** Air conditioning equipment, ducts, insulation and water pipes in the crawl space stop sweating, leading to longer life and greater efficiency. The US Dept. of Energy research states that encapsulation will provide over 15% reduction in heating and cooling costs.
- Attic Radiant Barriers:** The highly reflective foil surfaces reflect heat back into your home to keep you warmer in the winter. In addition, they reflect heat out during the summer months to keep you cool. Lower your heating and cooling costs by up to 25%. With savings like this you will have a fast return on this energy investment.
